1.) Explain about Different Testing Levels & Its purpose
give me ans

Software testing is performed at different levels to find defects early & to correctly.
Testing LEVELS:-

- (i) Unit Testing
- (ii) Integration Testing
- (iii) System Testing
- (iv) User Acceptance Testing

eg

Purpose:-

(i) Unit Testing:-

* Test individual functions

* Components of a code.
* Done by Developer.

(ii) Integration Testing:-

* To test interaction between modules.

* Done by Tester.

(iii) System Testing:-

* To Test the complete application.

* Done by QA Tester.

(iv) User Acceptance Testing (UAT)

* To Test the validation of business requirements of clients.
* & done by clients.

Flow Chart :

UNIT TESTING

Integration TESTING

System Testing

USER Acceptance Testing.

Product Discharge.

2) Explain about functional & non-functional Testing. Give atleast 2 examples for each category

Functional Testing:-

* It is a type of testing that verifies whether the software functions are working according to the specified need of clients.

* It does not need code. It just test input & output.

Example:-

- Login Testing
- Shopping cart Testing.

• Login Testing:-

* verify that a user can login with valid user name & password.

* verify that an error message is displayed for invalid of password & username.

• Shopping cart Testing:-

* verify that the ^{selected} product is can add to the cart (or) can remove in this cart.

* verify the amount of the product which is added in cart the total price. and display it.

NON FUNCTIONAL TESTING:-

- * It evaluates how well the system performs rather than what the system does.
- * In this we need to know the code & logic.
- * They will follow code and logic and there some process.

Example :-

- Load Testing
- Security Testing
- Performance Testing.
- Load Testing :-

* we need to verify how it work if the was more than 50 users access it (or) work it.
* reporting time of heavy load of work.

- Security Testing :- will also verify.
- * we need to verify that other

Person (or) users cannot access protected provided portal.

- * Performance Testing :-
- * we need to test how speed it works to run the code. if it is in traffic.
